Our Presence

Always at your end
Indian Leading quality Tools Company

Dear V3 Tools Customer,

Since the V3 was founded over years ago.

To us sustainable, responsibility towards our customers and partners means to convey **reliability and competence in all our actions.**

We Committed

By making consequent investment in top quality tools. Cost effective process in **highest ability to supply** on the market and above all **in people.**

So that also in future, you have a skilled and committed partner in us to fulfill your expectations.

You as our customer stand clearly in the centre of company endeavour along with the benefit we bring you. Our focus in your **productivity, value creation and efficiency.** We are committed and challenge our self to improve bit by every day.

Challenge us

We take our responsibility seriously as Indian Leading partners for quality tools. You can relay on us. Today and in future

High Performance File

**Premium
Quality**

HIGH PERFORMANCE FILE & TOOLS

Our Company :-

V3 Tools is professionally managed Company by Sr. Person, Who is having **25 years** of Marketing & Plant Experience from Premium Cutting & Hand tools Industries. We meet our Customer's requirement by committing to ensure consistent quality, timely delivery & Satisfying Customer needs of the **Times by Learning & Growing**. Our promise you will find a reliable" Partner for Growth" to provide solution of speedy & effortless smooth Innovative Tool Technology to fulfill your expectation.

Range of Products: V3 Files offers wide range of diverse application.

Hand Files are classified into the following categories: Engineering Files, Saws Sharpening file, Needle Files, Milled Files, Rasps Files & Special Files. V3 Files are available in range of application in wood working, automobile, engineering, aviation, heavy Industry, garages, steel industry etc.

Description of V3 Files & Tools :

It is the shape and size of the work piece, the material from which it is made and desired finish that determine the Choice of File. V3 range covers all these areas meeting the requirement of most National & International Standards with ample margin.

Drills

HSS Drills range from 1 mm to 13 mm Jobber, Stiff, Long & Extra Long. Centre Drill vidly Accepted in forging Industries.

Taps

HSS Taps coarse pitch and fine pitch, BSW, BSP, UNC, UNF & Nut taps for Auto and Ancillaries in range M3 to M60 mm.

Solid Carbide Tools

End mill VX1 & VX3 series from 1 mm to 25 mm, Drills-Jobber & Stuff, VX1 & VX3 series from 1 mm to 25 mm, Reamer, Roughing Endmill , Through Collant Drills and Full range of Centre Drills.

Our Operations

To become leading partner for growth in productivity metal working tools for machining. Our focus in your productivity efficiency and value creation.

Trading Competence

With the V3 tools you obtain most comprehensive range throughout market with **highest supply reliability through channel partner at the best value for money.**

Manufacturing Competence.

For more than 25 years of experience we had our finger on the pulse of the markets. Though a continuous dialogue with our customers and leading manufacturer for **premium quality.**

This know how and the unique technical competence of our manufacturer experts can be found combine in our premium brand v3

Service Competence

As a system partner for quality we are **always at your end**. From tool procurement to the optimum application. With comprehensive services for products and processes. From individual via professional advice. Always focused on **your success** due to **simplified processes and sustainable increase in productivity.**

Our Aim : Delighted Customers

Your Advantage

- Competent contact persons
- Highest Commitment
- Global Presence

Our Passion : Quality Tools

Our Vision : Our Customer's Success

Our Mission :

To become leading partner for growth in productivity metal working tools for machining

Our Values :

Simple

- In Communication
- In Organisation
- In all process

Focused :

- On Solutions / Services
- On core competencies
- On the essentials

Useful :

- For our Customers / Channel partner / suppliers
- For our company development
- For our staff / environment
- For the Next Generation.

File type/ Shape :-

WHICH FILE TO USE DEPENDS ON THE WORK MATERIAL AND THE DESIRED FINISH

The different name given to files vary according to their shape and use. The most common name are : Hand, Flat, Half Round, Round, Square, Three Square, Knife and double edge. e.g Flat files for flat and concave surface, Round files for enlarging holes, Triangular files for filing corners and angles, etc.

Machinist File - For stock removal and surface finish requirements on machined components.

Saws Files - For sharpening wood working Saws and similar thin edges such as chaff cutter blade, matchets.

Special Purpose file - Designed and used for specific application /materials.

Diamond Needle & Needle files - For precision filing application in die making and Jewelry.

Rasps - Used wood by pattern/cabinet makers, leather and similar soft materials for rapid stock removal.

Length:-

Desired stroke length will determine the length of file. The V3 range include files from 4"(100 mm) in length to 16"(400 mm) depending on Type. The most suitable file length depends entirely on work to be done or desired stroke length. The length of the file is always is given excluding the tang with exception of needle file, where the total length includes the tang.

**Tooth Type & Cut**

The tothing of a file can vary in many different ways. Different type of cut are chosen depending on the work material, the desired rate of material removal and the desired finish. The most common cuts are Single cut, Double cut, Oberg cut, Diagonal cut, Milled cut and rasp cut.

Single cut - Single cut files (mostly all saw Files are single cut) are used for sharpening & edging application e.g Sharpening of saws where the piece is hard, point of contact is less and finish is required.

Double Cut - Double Cut files need less effort for filing and also give good surface finish.

Bastard Cut - For stock removal and coarse finish.

Second Cut - For moderate stock removal and medium to coarse finish.

Smooth Cut - For smooth surface finish.

Rasp Cut - Special Cut formation for rapid stock removal from surface and softer materials like wood or leather.

For all cut Engineering needle and sharpening files the coarseness of cut is given in Number of work teeth per centimeter along with the length of the File. The most common degrees of coarseness are bastard and second and smooth cut should be chosen.

For diagonal files, milled files the degree of coarseness is given in number of tooth tips per cm².

AVAILABLE CUTS :-

Technical Guide

- A new file should be used with light pressure in the beginning, preferably on a surface which has been filed earlier.
- In case of clogging of file teeth, clean the teeth with a soft wire bush
- Use the files for cutting in the forward stroke only.
- Filing jobs should be held rigidly.

V3PIL10	10	250	18	9.0
V3PIL12	12	300	21	10.6

- For jobs where a standard hand file is too wide or too thick e.g. for filing narrow grooves
- Filler files are used by mill weights
- For the manufacturing of dies and punches etc.
- These files are used mostly by machinists for filling slots and key ways. Similar to hand files but narrower
- Rectangular cross section is a similar design of hand file.
- Shape : edges and surfaces parallel
- Double cut one edge uncut, one edge single cut

V3ALF12	12	300	29.8	6.1
V3ALF14	14	350	35.5	7.1

- For jobs used for flat surfaces of aluminum alloy and other non ferrous metal.
- Removal of soft material lead, aluminum, soft wood and fillers.
- Both side teeth are design for fast cutting and teeth minimize clogging of metal.
- Shape : Tapered towards the tip
- Edges parallel and double cut
- Rectangular in cross section
- Good for finishing in most material

V3ALH12	12	300	29.55	8.6
V3ALH14	14	350	34.5	10

- For jobs used for flat as well as curve surfaces of aluminum alloy and other non ferrous metal.
- Removal of soft material lead, aluminum, soft wood and fillers.
- One side in half round and other side is flat
- Shape : Tapered towards the tip
- Edges parallel and double cut
- Teeth are designed for fast cutting and to minimize clogging of metal
- Good for finishing in most metal

V3DRD14	14	350	33.5	7.7

- For jobs used for soft metal, carbon steel and aluminum alloy.
- Both side curved teeth
- One side in half round and other side is flat
- Shape : Edges parallel and single cut surface have milled teeth
- Files are milled cut with tang
- Good for finishing and free clearance for chips
- Teeth are designed for fast cutting and to minimize clogging of metal
- Good for finishing in most metal

SUGGESTED PARAMETERS - SPEED & FEED DATA

Cutting Speed. (Vc) = $\pi \times D \times S / 1000$

Spindle Speed (s) = $V_c \times 1000 / \pi D$

Feed (F) = $S \times f \times N$

Feed Per Tooth (f) = $F / S \times N$

Vc = Cutting Speed (v)

π = The Circular Constant (3.14)

D = Diameter (mm)

S = Spindle Speed (min-1)

F = Feed (mm/min)

F = Feed Per Tooth (mm/Tooth)

N = Number of Flutes

Application : Side - Milling

Use cutting fluid with smoke retardant.

Recommend to use oil mist coolant for machining hardened steels

Available only for Side Cutting

Adjust both spindle speed and feed of the same rate.
